SCALE FOR PROJECT TWEETS (/PROJECTS/TWEETS)

You should evaluate 1 student in this team

Git repository

`git@vogsphere.msk.21-school.ru:vogsphere/intra-uuid-88212`

Introduction

The methodology of School 21 makes sense only if peer-to-peer assessments are done seriously. This document will help you to do it properly.

- Please, stay courteous, polite, respectful and constructive in all communications during this assessment. The bond of trust between community 21 and you depends on it.

- Highlight possible malfunctions of the work done by the person and take the time to discuss and debate it.

- Keep in mind that sometimes there can be differences in interpretation of the tasks and the scope of features. Please, stay open-minded to the vision of the other.

Guidelines

- Evaluate only the files that are on the GIT repository of the student or group.

- Doublecheck that the GIT repository is the one corresponding to the student or the group as long as to the project.

- Meticulously check that nothing malicious has been used to mislead you and have you assess something except the content of the official repository.

- If you have not finished the project yet, it is compulsory to read the entire subject before starting the review.

- Use the special flags in the scale to report an empty or non-functional solution as long as a case of cheating. In these cases, the assessment is completed and the final grade is 0 (or in a case of cheating is -42). However, except for a case of cheating, you are encouraged to continue reviewing the project to identify the problems that caused the situation in order to avoid them for the next assessment.
 - You must stop giving points from the first wrong exercise even if the following exercises are correct.
-

Preliminaries

Respect the rules

- The repository contains the work of the student (or group).
- The student is able to explain their work at any time during the assessment.
- The general rules are respected throughout the assessment.

 Yes

 No

Project "Tweets"

Mandatory part

General

- The repository contains an ipynb-file(s) as well as optionally additional files that help to perform the tasks
- The final table with the results of different algorithms and their hyperparameters, scores exists

Preprocessing

- All the 18 ways of preprocessing were implemented and the corresponding datasets are stored

Similarity

- The top-10 most similar tweets are found for all the 18 ways of preprocessing

Machine learning

- AUC higher than 0.832 is achieved
- Gridsearch was applied to find the best hyperparameters

☒ Yes☐ No

Bonus part

- AUC higher than 0.851 is achieved
- AUC higher than 0.873 is achieved
- word2vec is used for text vectorization

Rate it from 0 (failed) through 5 (excellent)

Ratings

Don't forget to check the flag corresponding to the defense

☒ Ok☐ ★ Outstanding project☐ 📄 Empty work☐ 💬 No author file☐ 🧠 Invalid compilation☐ 📋 Norme☐ 🖨 Cheat☐ 🚒 Crash☐ 💧 Leaks☐ 🚫 Forbidden function
